

Leading Pharma Enrolls 56% Faster With WCG

THE CHALLENGE

A leading sponsor initiated a time-critical and complex adult Staphylococcus vaccine study. Per the protocol design, this global study needed to address two key areas of support, including:

- The assessment of participant's eligibility, requiring a real-time review of daily surgical schedules.
- Participant identification and coordination of communication pathways for referral networking.

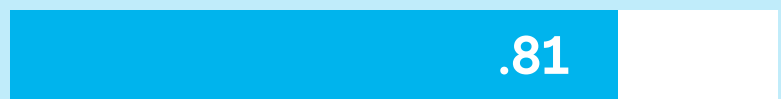

1 Optimized sites identified WCG's Enrollment & Retention solution as a worthwhile intervention that led to the success of this clinical trial.

2 The top 5 pharma met their enrollment goal a full year faster with WCG Support.

“Thank you very much for the support you have given us. It has been essential for the realization of this clinical trial. I hope to count on your collaboration on future occasions.”

—PRINCIPAL INVESTIGATOR

“Our site desperately needed the additional staff support and WCG provided everything we needed to successfully conduct the study.”

—STUDY COORDINATOR

OUR SOLUTION

What began as a 19-site study quickly became a 53-site study. As a result, additional services were promptly expected of the site while delivering optimal results.

WCG assisted sites with participant transportation and concierge support, waiting room video creation in two languages, and study website management. WCG also deployed Clinical Research Coordinator (CRC) and study coordinator support, which included participant screening, data entry, source document creation, regulatory filing, and close out assistance.
